

SPC – PSD

High Linearity Position Sensing Detector with Signal Processing Circuit

Part number: S1 – 0257

Description: 1L2,5_SU74_SPC01

The SiTek 1L2,5_SU74_SPC01 is a 1L2,5 PSD with an attached signal processing circuit. The PSD currents are output as bipolar voltages representing the position and intensity of the centroid of a light spot on the PSD. The intensity signal can be used for external normalisation of the position (difference) signal in regard to light intensity dependence. Inputs are available for external adjustment of offset voltages.

In order to obtain maximum precision, high reliability and small size the SPC01 is built using thick film technology and laser trimmed resistors on a 20,5 x 20,5 mm² ceramic substrate. The SPC01 is delivered with surface mount leads.

Block schematics

Features

- Analogue outputs of all sum and differential signals
- Laser trimmed resistors
- Inputs for external adjustment of offset voltages
- Good thermal tracking
- Small size

Applications

- Analogue PSD front-end in displacement measuring systems for OEM as well as evaluation purposes.

Application Information

Inputs 6 and 14 are used for external offset compensating voltages. Such a voltage can, as shown in the figure, be derived from a voltage divider and connected to the SPC input through a suitable series resistor.
