

## ModBox-OBand-NRZ series

O-Band, 28 Gb/s, 44 Gb/s, 50 Gb/s Reference Transmitters

ModBox

### FEATURES

- Full O-Band Reference Transmitter
- Up to 28 Gb/s, 44 Gb/s, 50 Gb/s
- Reliable & reproducible measurements
- High eye diagram stability
- Extinction Ratio Adjustable

### APPLICATIONS

- Transmission system test
- Components characterization
- Production test
- R&D laboratories

### OPTIONS

- 5 nm and 20 nm spacing lasers
- Variable Extinction Ratio
- Receiver stage
- Multi-Channel
- 850 nm, 1310 nm & 1550 nm, C-band

The ModBox-OBand-NRZ series is a family of Reference Transmitters that generate excellent quality NRZ optical data streams up to 28 Gb/s, 44 Gb/s, 50 Gb/s in the O-band. These transmitters produce very clean eye diagrams with high SNR and short rise and fall times. They also provide the flexibility of adjusting the extinction ratio for vertical eye closure.

The ModBox-OBand-NRZ series provides R&D and Production engineers with a user friendly turn-key instrument delivering state of the art performance. It is being used in optical telecommunications laboratories and production test beds.

The equipment incorporates a modulation stage based on a chirp-free LiNbO<sub>3</sub> Mach-Zehnder modulator, coupled with a high performance RF driver and an automatic bias control circuitry. It also integrates a DFB laser source and an optional photo-detector.

In addition to the O-band, iXblue offers reference transmitters in the C-band, 1 μm region and at 850 nm.

### Performance Highlights

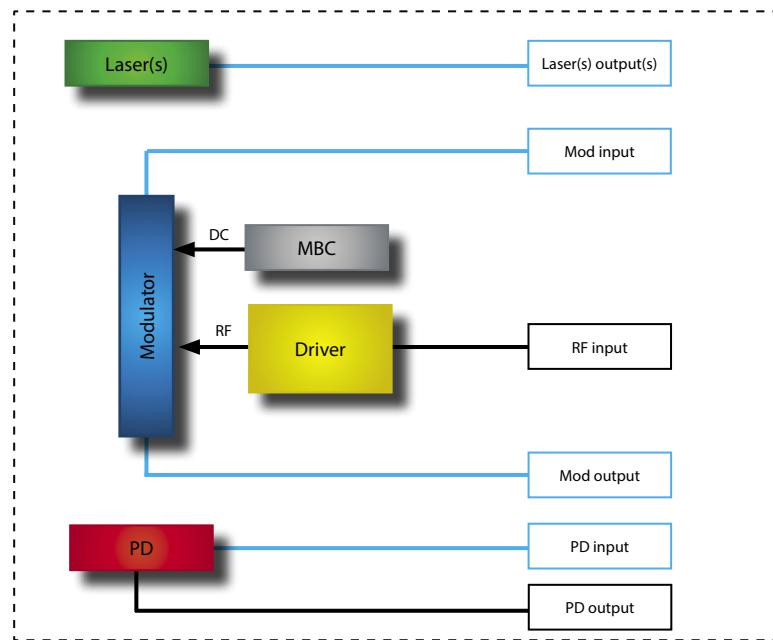

Parameter	Min	Typ	Max
Operating wavelength	1270 nm	1310 nm	1330 nm
Modulation format		NRZ	
Modulation bandwidth		28 Gb/s, 44 Gb/s, 50 Gb/s	
Modulated output power (option HP)	6 dBm	-	-

Functional Block Diagram

## The ModBox-OBand-NRZ series feature:

- A chirp-free X-cut LiNb<sub>3</sub> (Lithium Niobate) Mach-Zehnder Intensity modulator. It is selected for its high electro-optic bandwidth and flat, low ripple, electro-optic response curve.
- A high bandwidth limiting RF driver with gain and crossing levels adjustment for eye diagram optimization.
- A modulator bias controller. The internal LiNb<sub>3</sub> modulator is a X-cut device with very low drift. However an automatic bias control circuit is provided to lock the operating point of the modulator at the quadrature point whatever the environmental conditions. The MBC ensures a highly stable optical output signal to provide reliable and reproducible measurements.
- A 1310 nm low RIN laser is integrated by default. For convenience, an external patch cord is delivered to connect the laser output to the optical input of the modulation stage. Wavelength and power are tunable through the front panel controls or the ModBox software interface.

The ModBox-OBand-NRZ is controlled from the front panel via the Smart interface with a simple rotary knob and keypad. The Smart manual interface allows for bias control circuit, driver gain and laser settings. It comes also with a simple GUI solution, Windows based and implemented through the USB interface of the user PC.

**Absolute Maximum Ratings**

Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. These are absolute stress ratings only. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of the data sheet. Exposure to absolute maximum ratings for extended periods can adversely affect device reliability.
