

1 W Output Power at 577 nm

Yellow High-Power Laser

In addition to red, green and blue lasers, LASER COMPONENTS now also offers a laser source emitting yellow light. Using an award winning, patented technology, US manufacturer Necsel was able to produce a laser beam with a wavelength of 577 nm and an output power of 1 W.

Yellow lasers are mainly used in medical and bioscience applications. Their light has detoxifying and antidepressant effects. Doctors have achieved success in the treatment of borreliosis, multiple sclerosis and depression through intravenous therapy with yellow laser light.

The Company

LASER COMPONENTS specializes in the development, manufacture, and sale of components and services in the laser and optoelectronics industry. At LASER COMPONENTS, we have been serving customers since 1982 with sales branches in five different countries. We have been producing in house since 1986 with production facilities in Germany, Canada, and the United States. In-house production makes up approximately half of our sales revenue. A family-run business, we have more than 220 employees worldwide.
