

DC-1 MBd Long Reach RedLink Transmitter and Receiver Pair

DATA SHEET

530 nm DC-1 MBd RedLink® Fiber Optic Transmitter and Receiver Pair

FEATURES

- Optimized for data transmission from DC to 1 MBd
- Visible LED at green wavelength (530 nm)
- Extended length applications over POF (150 - 200 m)
- Industrial temperature range -40 °C to +85 °C
- RoHS compliant and flame retardant (UL 94 V-0) connector housings
- TTL/CMOS compatible for ease of design
- Low pulse width distortion
- Low Current Consumption
- Compatible with Versatile Link cables and connectors

APPLICATIONS

Table 1 APPLICATIONS	
Application	Motor Control, Voltage Isolation, Drives, Inverters, Industrial Control, Gaming, Medical Imaging
Standard	Low-speed serial RS232, RS485, CAN Bus, Modbus, Profibus
Max Distance	150 – 200 meters Step Index (SI) POF depending upon ambient temperature and installation conditions
Speed	DC to 1 MBd

DESCRIPTION

The Firecomms Long Reach DC to 1 MBd RedLink transmitter is based on a highly reliable gallium indium nitride LED. The receiver is based on a fully integrated differential photo-diode with TIA and limiting amplifier.

Housed in non-conducting plastic RedLink connector housings, the FT01MHNG transmitter housing is green and the FR05MHIR receiver is blue. The housings are compatible with the Versatile Link style fiber plug and are ideal for use with Plastic Optic Fiber (POF).

The transmitter can be driven from TTL type logic drivers and the receiver is a single-ended TTL/CMOS type output. Both transmitter and receiver operate over the industrial temperature range of -40 °C to +85 °C supporting many industrial applications where reliable command and control response is required in electrically harsh environments.

The transmitter utilizes a green, 530 nm, eye-safe highly-efficient gallium nitride LED. Since the attenuation of POF is lower at green wavelengths a maximum link distance of greater than 150 m can be easily achieved and is therefore a low cost alternative to using glass fibers. The transmitter operates over a wide range of drive current that can be adjusted using a serial resistor to minimize current consumption for known fiber distances.

The receiver has dual photo-diodes which act as a differential light sensor giving enhanced immunity to EMI and EMC from the local environment making the unit ideal for use in electrically noisy applications. The receiver has a single data output compatible with TTL/CMOS electronics. The transmitter and receiver are typically used at 1 MBd over POF in industrial serial bus protocol links.

DC-1 MBd TRANSMITTER AND RECEIVER ABSOLUTE MAXIMUM RATINGS

These are the absolute maximum ratings at or beyond which the FOT can be expected to be damaged.

Notes:

1. 260 °C for 10 sec, one time only, at least 2.2 mm away from lead root.
2. When peak forward current exceeds 20 mA then the duty cycle must maintain a pulse width (PW) less than 1 µs and average forward current less than or equal to 20 mA. [20 mA ≤ I_{FPK} ≤ 40 mA ↔ $I_{F AVG} \leq 20$ mA AND PW ≤ 1 µs].

SPECIFICATIONS, Handling

RedLink devices are color coded, FT01MHNG transmitters are green and receivers are blue. They are auto-insertable. They are tested for handling in static controlled assembly processes (HBM). Cleaning, degreasing and post solder washing should be carried out using standard solutions compatible with both plastics and the environment. For example, recommended solutions for degreasing are alcohols, (methyl, isopropyl and isobutyl). In the soldering process, non-halogenated water soluble fluxes are recommended. RedLink products are not suitable for use in reflow solder processes (infrared/vapor-phase reflow). The dust plug should be kept in place during soldering, washing and drying processes to avoid contamination of the active optical area of each connector.

RECEIVER ELECTRICAL AND OPTICAL CHARACTERISTICS

Test Conditions:

1. Test data was validated over the full temperature range of -40 °C to +85 °C, and over the full voltage range of 4.5V to 5.5V unless otherwise noted. Typical data are at +25 °C with Vcc = 5V.
2. Input power levels are for peak (not average) optical input levels. For 50% duty cycle data, peak optical power is twice the average optical power. Optical power for POF is measured when coupled into 0.5 m of a 1 mm diameter 0.5 NA POF and a large area detector.
3. Pins 5 and 8 are for mounting and retaining purposes. Recommended to connect to Ground Plane, may be left.
4. In the recommended receiver circuit, with an optical signal from the recommended transmitter circuit.
5. Pin 4 is electrically isolated internally. Pin 4 may be externally connected to pin 1 for board layout compatibility in existing designs.
