DR-AN-20-HO

20 GHz Analog High Output Voltage Driver

The DR-AN-20-HO is a wideband RF amplifier module designed for analog applications at frequencies up to 20 GHz.

The DR-AN-20-HO is characterized by a low Noise Figure and a linear transfer function whose 1 dB compression point is above 25 dBm. It exhibits flat Group Delay and Gain curves with reduced ripple over the entire bandwidth.

The DR-AN-20-HO operates from a single power supply for safety and ease of use, and offers gain control over 3 dB. The amplifier comes in a compact 52 mm x 25.6 mm housing with K type RF connectors (compatible SMA) and with an optional heat-sink.

This amplifier module is ideally suited to drive optical modulators for analog applications.

Features

- Output voltage up to 15.9 V_{pp}
- Linear amplifier
- Flat gain up to 20 GHz
- Single voltage power supply
- Low group delay variation

Applications

- Radio Over Fiber
- Frequency-comb
- Spectrum broadening

Options

- Heat-sink

Related Equipments

- MXIQER, MXAN, phase modulators

Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. These are absolute stress ratings only. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of the data sheet. Exposure to absolute maximum ratings for extended periods can adversely affect device reliability.
