DR-VE-10-MO

Versatile RF amplifier module

The DR-VE-10-MO is a high-grade OEM RF amplifier assembled with the latest generation of monolithic microwave integrated circuits (MMICs) chips. This confers to the device the highest performance we can expect from an RF amplifier: wide bandwidth for fast rise and fall time, high linearity, very good signal to noise ratio, and very low time jitter.

The DR-VE-10-MO is a non-inverting medium output voltage RF amplifier module. It is named VErSatile because it can be used for linear (analog, RFoF, PAM), low duty cycle pulses (square or pulse shaping, PPM) and digital modulation schemes (RZ & NRZ).

For each of these applications, the RF amplifier is factory preset with optimal setpoints for a convenient and ease of use operation. An embedded microcontroller allows the user to select the right operating mode through a Graphical User Interface. The GUI also comes with a custom tuning mode where the gain, amplitude and cross point can be optimized over a very wide tuning range.

**Features**

- Output voltage up to 8 Vpp
- Linear / pulse / digital amplifier
- Bandwidth from 16 kHz up to 11 GHz
- Preset modes

Applications

- RFoF, PAM, Analog modulation
- PPM, low duty-cycle pulse train
- Pulse carving and shaping
- Digital RZ, NRZ

Related Equipments

- Phase and intensity modulators
